## EXPERIENCE

### Junior Developer

Toronto, ON

Edsembli

May 2021 to Sep 2021

- Implemented various modules in Edsembli's HRP solution using .NET framework with AngularJS which helped the company to develop a web based solution.
- Resolved bugs by debugging using Chrome Developer tools and Postman which helped in faster launch of features.

### Teaching Assistant

Toronto, ON

University of Toronto

Jan 2021 to Apr 2021

- Held labs for CSC108 (Python programming, basic algorithm construction and introductory complexity analysis) to help students grasp material taught in classes

### Core Software Developer

Toronto, ON

Grey Software

Jun 2020 to Jan 2021

- Pitched and implemented ideas for improving business models and it's representation of the organization on the website using Nuxt and Quasar
- Utilized bash scripts for formatting, editing and performing various processes which made development process smoother and uniform

## LEADERSHIP AND VOLUNTEERING

### Technology Lead - Workshop

Toronto, ON

Developer Student Club by Google

Aug 2021 to Present

- Lead workshops attended by 200+ students to teach them about various technologies

### Technology Officer

Toronto, ON

UTM Computer Science Student Community

May 2020 to Apr 2021

- Created and maintained the Computer Science Student Community (CSSC) website with a in-built course manager ([github.com/utm-cssc/website](https://github.com/utm-cssc/website)) to help students keep update with their courses using Vue, NuxtJS, Vuex and Tailwind
- Hosted workshops, developed courses and content for student's success.
- Organized tech of the month and interview preparation initiative to enhance student technical skills

## PROJECTS

### Material Maths

A math application with an algorithm to create new question to help students improve their mental maths with 2000 users/yr

- Implemented new UI to improve user experience using latest JS framework Quasar
- Created a scoring system using state management tools (Vuex) and TypeScript to gamify the process of learning
- Added a configuration module with different practice modes to determine what students want to practice

### GameFace

A platform to have unbiased reviews on the various games out there

- Designed and developed beautiful UI by utilizing ReactJS with Bootstrap and MaterialUI
- Created a RESTful API to perform CRUD operations on users and games using NodeJS and MongoDB
- Developed user authentication module in NodeJS and improved developer experience by creating middle wares to check for authentication.

### CardsMadeEasy

A JavaScript library to help frontend developers create beautiful cards for their applications

- Designed and developed cards to have maximum customization to suit all requirements
- Added functionality to easily manage multiple cards with responsiveness to all device sizes
- Created animations and custom carousel using CSS and JavaScript to ease development process for a developer

## AWARDS

- Dean's List: Awarded to high academic performer (Greater than 3.5 GPA)
